

Name: \_\_\_\_\_

Date: \_\_\_\_\_

**Standards:** MA.5.GR.1.1; MA.5.GR.4.1-4.2

Answer each question. Show your work when asked.

This check covers the lessons listed above.

**1 Angle Measure**An angle measures  $142^\circ$ .

Classify this angle.

Obtuse angle (between  $90^\circ$  and  $180^\circ$ ). \_\_\_\_\_**2 Triangle Angle Sum**A triangle has angles of  $55^\circ$  and  $75^\circ$ .

Find the third angle.

 $180^\circ - 55^\circ - 75^\circ = 50^\circ$ . \_\_\_\_\_**3 Classify the Triangle**

A triangle has sides 6 cm, 6 cm, and 6 cm.

Classify it by sides and by angles.

Equilateral (all sides equal); acute (all angles =  $60^\circ$ ). \_\_\_\_\_

**8 Classify by Angles**

A triangle has one angle of  $95^\circ$ .

Classify the triangle by its angles.

Obtuse triangle. \_\_\_\_\_

**9 Parallelogram Angles**

A parallelogram has one angle of  $58^\circ$ .

Find all four angles.

$58^\circ$ ,  $122^\circ$ ,  $58^\circ$ ,  $122^\circ$  (opposite angles equal; adjacent angles supplementary)...

**10 Is Atlas Correct?**

Atlas says a triangle can have two right angles.

Is Atlas correct? Explain using the angle sum property.

No. Two right angles =  $180^\circ$ , leaving  $0^\circ$  for the third angle. A valid triangle requires all three angles to be greater than  $0^\circ$ , so the
