

Name: _____

Date: _____

Standards: MA.5.AR.1.1; MA.5.AR.3.1-3.2

Answer each question. Show your work when asked.

This check covers the lessons listed above.

1 Write a Ratio

A bag has 7 green counters and 3 yellow counters.

Write the ratio of green to yellow in simplest form.

7:3 (already in simplest form). _____

2 Equivalent Ratios

The ratio 2:5 is equivalent to ?:25.

Find the missing number.

Scale factor = $25 \div 5 = 5$. Missing = $2 \times 5 = 10$. _____**3 Simplify the Ratio**

Simplify the ratio 24:36.

Divide both numbers by their greatest common factor.

 $GCF(24, 36) = 12$. $24 \div 12 : 36 \div 12 = 2:3$. _____

4 Find a Quantity

The ratio of pens to pencils is 3:7. There are 21 pencils.

How many pens are there?

Scale factor = $21 \div 7 = 3$. Pens = $3 \times 3 = 9$. _____

5 Three-Quantity Ratio

A mix of nuts has almonds to cashews to peanuts in the ratio 2:3:5. There are 20 peanuts.

How many almonds and cashews are there?

1 unit = $20 \div 5 = 4$. Almonds = 8; Cashews = 12. _____

6 Ratio Table

The ratio of cups of rice to cups of broth is 1:2.

Complete: Rice 1, 2, 3, 4; Broth ?, ?, ?, ?

Broth: 2, 4, 6, 8. _____

7 Part-to-Whole

In a group of 30 students, 18 play a sport.

Write the ratio of sport players to the whole group in simplest form.

$18:30 = 3:5$. _____

8 Sharing in a Ratio

Two friends share 45 trading cards in the ratio 4:5.

How many cards does each friend get?

Total parts = 9. 1 part = 5. Friend 1 = 20; Friend 2 = 25. _____

9 Are They Equivalent?

Are 6:9 and 8:12 equivalent ratios?

Simplify both and compare.

$6:9 = 2:3$. $8:12 = 2:3$. Yes, they are equivalent. _____

10 Is Kai Correct?

Kai says the ratio of 15 red to 10 blue beads is 2:3.

Is he correct? Simplify the ratio to check.

$15:10 \div 5 = 3:2$. Kai reversed it — the correct ratio of red to blue is 3:2, not 2:3.
