Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.02.06.

### 1 Multi-Step Word Problems

Write an expression and solve.

(A) A store has 5 crates of oranges, each with 24 oranges. They sell 37 oranges. How many are left?

(B) Sophia earns \$14 an hour. She works 8 hours on Saturday and 6 hours on Sunday. How much does she earn in all?

### 2 Comparing Expressions

Without evaluating, predict which expression is greater. Then check.

$4 \times (15 + 5)$  vs.  $4 \times 15 + 5$ . Which is greater? By how much?

Answer and Explanation \_\_\_\_\_

**3 School Store Problem**

The school store sells pens for \$2 each and notebooks for \$3 each. Kai buys 4 pens and 5 notebooks.

Write an expression and find the total cost. Then find how much change Kai gets from \$30.

Expressions and Answers \_\_\_\_\_

**4 Packaging Problem**

A bakery packs 6 muffins in a small box and 12 muffins in a large box. They pack 8 small boxes and 5 large boxes.

Write a single expression to find the total muffins packed. Evaluate it.

Expression and Answer \_\_\_\_\_

**5 Which Expression Matches?**

Mira writes the expression  $(3 \times 8) + (2 \times 6)$  for this problem: "There are 3 tables of 8 students and 2 tables of 6 students. How many students are there?" Leo says the expression should be  $3 + 8 + 2 + 6$ .

Who is correct? Evaluate both expressions and explain which one models the problem correctly.
