

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.03.06.

1 More 3-Digit ÷ 2-Digit

Find each quotient and remainder.

$$437 \div 19 = \underline{\quad\quad} \text{ R } \underline{\quad\quad} \quad | \quad 526 \div 23 = \underline{\quad\quad} \text{ R } \underline{\quad\quad} \quad | \quad 612 \div 28 = \underline{\quad\quad} \text{ R } \underline{\quad\quad}$$

Answers _____

2 Check with Multiplication

Divide, then multiply to check.

(A) $414 \div 18$: Quotient = $\underline{\quad\quad}$; Check: $\underline{\quad\quad} \times 18 = \underline{\quad\quad}$

(B) $575 \div 25$: Quotient = $\underline{\quad\quad}$; Check: $\underline{\quad\quad} \times 25 = \underline{\quad\quad}$

Answers _____

3 Larger Remainders

Find each quotient. Check that the remainder is less than the divisor.

$$698 \div 31 = \underline{\quad} \text{ R } \underline{\quad} \quad | \quad 783 \div 42 = \underline{\quad} \text{ R } \underline{\quad}$$

Answers _____

4 Book Fair

A librarian has 648 books to display equally on 36 shelves.

How many books per shelf? If 12 more books arrive, how many shelves are needed to hold all books equally? Show your work.

Answers _____

5 Does Remainder Matter?

Leo divides 560 sandwiches equally among 24 tables and gets 23 R 8. He says each table gets 23 sandwiches and the 8 extras are wasted.

Is Leo's interpretation reasonable? Suggest another way to handle the remainder in a real-world setting. Explain.

Explanation _____
