

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.04.04.

1 Add Mixed Numbers – Same Denominator

Add. Simplify if possible.

$$2\frac{3}{5} + 1\frac{4}{5} = \underline{\hspace{2cm}} \quad | \quad 3\frac{7}{8} + 2\frac{1}{8} = \underline{\hspace{2cm}} \quad | \quad 4\frac{5}{9} + 1\frac{7}{9} = \underline{\hspace{2cm}}$$

Answers _____

2 Add Mixed Numbers – Unlike Denominators

Add. Write answers as mixed numbers in simplest form.

$$2\frac{1}{2} + 1\frac{1}{3} = \underline{\hspace{2cm}} \quad | \quad 3\frac{3}{4} + 1\frac{1}{6} = \underline{\hspace{2cm}}$$

Answers _____

3 Regrouping to Add

Add. You may need to regroup the fractional sum.

$$4\frac{3}{4} + 2\frac{2}{3} = \underline{\hspace{2cm}} \quad | \quad 5\frac{5}{6} + 3\frac{3}{4} = \underline{\hspace{2cm}}$$

Answers _____

4 Trail Mix

Leo pours $2\frac{1}{3}$ cups of nuts into a bowl, then adds $1\frac{3}{4}$ cups of dried fruit.

How many cups of trail mix are in the bowl? Show your work.

Answer _____

5 Estimate First

Atlas estimates $3\frac{7}{8} + 2\frac{1}{4}$ by rounding each mixed number to the nearest whole: $4 + 2 = 6$.

Find the exact answer. Is Atlas's estimate reasonable? Explain how estimation helps check an answer.

Answer and Explanation _____
