

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.04.07.

1 Subtract Mixed Numbers – Part 2 Practice

Subtract. Simplify all answers.

$$9 \frac{1}{3} - 4 \frac{5}{6} = \underline{\hspace{2cm}} \quad | \quad 8 \frac{1}{4} - 3 \frac{2}{3} = \underline{\hspace{2cm}} \quad | \quad 10 \frac{1}{6} - 5 \frac{3}{4} = \underline{\hspace{2cm}}$$

Answers _____

2 Subtract from Whole Numbers

Subtract. Remember: a whole number can be rewritten as a mixed number.

$$7 - 2 \frac{3}{5} = \underline{\hspace{2cm}} \quad | \quad 10 - 4 \frac{7}{8} = \underline{\hspace{2cm}} \quad | \quad 5 - 1 \frac{2}{3} = \underline{\hspace{2cm}}$$

Answers _____

3 Choose Your Method

Use any method to subtract.

$$12 \frac{3}{8} - 7 \frac{5}{6} = \underline{\hspace{2cm}} \quad | \quad 15 \frac{1}{4} - 8 \frac{7}{12} = \underline{\hspace{2cm}}$$

Answers _____

4 Cooking Challenge

Sophia had 6 cups of batter. She used $2\frac{5}{8}$ cups for pancakes and $1\frac{3}{4}$ cups for waffles.

How much batter is left? Write a single expression and solve it step by step.

Answer _____

5 Two Different Methods

Atlas solves $8 - 3\frac{5}{8}$ by rewriting 8 as $7\frac{8}{8}$ and then subtracting. Mira converts both to improper fractions:
 $\frac{64}{8} - \frac{29}{8} = \frac{35}{8} = 4\frac{3}{8}$.

Show both methods completely. Do they give the same answer? Explain which method you prefer and why.

Explanation _____
