

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.05.01.

1 Fraction × Whole Number

Find each product.

$$\frac{2}{3} \times 6 = \underline{\hspace{2cm}} \quad | \quad \frac{3}{4} \times 8 = \underline{\hspace{2cm}} \quad | \quad \frac{5}{6} \times 12 = \underline{\hspace{2cm}}$$

Answers _____

2 Write as Multiplication

Rewrite as a fraction multiplication and solve.

(A) $\frac{2}{5}$ of 15 = _____

(B) $\frac{3}{8}$ of 24 = _____

(C) $\frac{4}{9}$ of 27 = _____

SHOW YOUR WORK

Answers _____

3 Fraction Results

Find each product. Write as a fraction or mixed number in simplest form.

$$\frac{2}{3} \times 4 = \underline{\hspace{2cm}} \quad | \quad \frac{5}{6} \times 7 = \underline{\hspace{2cm}} \quad | \quad \frac{3}{8} \times 10 = \underline{\hspace{2cm}}$$

Answers _____

4 Pizza Party

Each pizza is cut into 8 slices. Sophia eats $\frac{3}{8}$ of each pizza. There are 4 pizzas.

How many total slices does Sophia eat? Show your work.

Answer _____

5 Repeated Addition Connection

Kai says that $\frac{2}{3} \times 4$ means adding $\frac{2}{3}$ four times: $\frac{2}{3} + \frac{2}{3} + \frac{2}{3} + \frac{2}{3}$.

by Kai's claim by adding. Then multiply using the rule and compare. Explain the connection between repeated addition and multiplication of a fraction by a whole number.

Explanation _____
