

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.05.05.

1 Multiply Fractions

Find each product. Simplify where possible.

$$\frac{2}{3} \times \frac{3}{4} = \underline{\hspace{2cm}} \quad | \quad \frac{3}{5} \times \frac{2}{3} = \underline{\hspace{2cm}} \quad | \quad \frac{4}{7} \times \frac{7}{8} = \underline{\hspace{2cm}}$$

Answers _____

2 Simplify Before Multiplying

Cross-simplify first, then multiply.

$$\frac{4}{9} \times \frac{3}{8} = \underline{\hspace{2cm}} \quad | \quad \frac{5}{6} \times \frac{12}{25} = \underline{\hspace{2cm}} \quad | \quad \frac{7}{10} \times \frac{5}{14} = \underline{\hspace{2cm}}$$

Answers _____

3 Area Model

Use an area model to find $\frac{3}{4} \times \frac{2}{5}$.

Draw a rectangle, divide it into fourths horizontally and fifths vertically, shade the product region. What is $\frac{3}{4} \times \frac{2}{5}$?

Answer _____

4 Fabric Problem

Mira has $\frac{3}{4}$ of a yard of fabric. She uses $\frac{2}{3}$ of that fabric for a quilt square.

How many yards of fabric does she use? Show your work.

Answer _____

5 Predict the Size

Before calculating, predict: is $\frac{5}{6} \times \frac{4}{7}$ greater than, less than, or equal to $\frac{5}{6}$? Equal to, less than, or greater than $\frac{4}{7}$?

State your predictions, then calculate. Explain: when does multiplying a fraction by another fraction give a product less than both factors?

Predictions, Answer, and Explanation _____
