

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.12.01.

1 Find the Average

Five students scored: 82, 90, 76, 88, and 74 on a math quiz.

Find the average (mean) score.

$$(82 + 90 + 76 + 88 + 74) \div 5 = 410 \div 5 = 82. \quad \underline{\hspace{2cm}}$$

2 Average with Equal Groups

A baker packed 6 boxes of cookies with totals: 12, 15, 10, 14, 13, and 16 cookies.

Find the average number of cookies per box.

$$(12 + 15 + 10 + 14 + 13 + 16) \div 6 = 80 \div 6 \approx 13.3 \text{ cookies.} \quad \underline{\hspace{2cm}}$$

3 Find a Missing Value

The average of four numbers is 25. Three of the numbers are 18, 30, and 27.

Find the fourth number.

$$\text{Total needed} = 25 \times 4 = 100. \text{ Known sum} = 18 + 30 + 27 = 75. \text{ Fourth number} = 100 - 75 = 25. \underline{\hspace{1cm}}$$

4 Average Temperature

Daily high temperatures for a week (°F): 88, 91, 85, 90, 87, 93, 86.

Find the average daily high temperature for the week.

$$(88 + 91 + 85 + 90 + 87 + 93 + 86) \div 7 = 620 \div 7 \approx 88.6^\circ\text{F}. \quad \underline{\hspace{2cm}}$$

5 Reasoning: Sophia's Average

Sophia earned these scores on five tests: 70, 80, 90, 85, and 75. She says her average is 80.

Check her work. Is she correct? Show your calculation.

$$(70 + 80 + 90 + 85 + 75) \div 5 = 400 \div 5 = 80. \text{ Yes, Sophia is correct. } \underline{\hspace{2cm}}$$
