

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.12.02.

1 Average Using a Table

Books read per month: January 8, February 6, March 9, April 7, May 10.

Find the average number of books read per month.

$(8 + 6 + 9 + 7 + 10) \div 5 = 40 \div 5 = 8$ books. _____

2 Weighted Groups

Class A has 20 students with an average score of 85. Class B has 30 students with an average score of 75.

Find the overall average score for all 50 students combined.

Total A = $20 \times 85 = 1700$. Total B = $30 \times 75 = 2250$. Combined average = $3950 \div 50 = 79$. _____

3 Average Distance

A cyclist rode 24 km, 18 km, 30 km, and 20 km on four days.

What was the average distance per day?

$(24 + 18 + 30 + 20) \div 4 = 92 \div 4 = 23$ km. _____

4 Find the Missing Score

Atlas took 5 spelling tests. His average score is 88. His first four scores were 84, 92, 88, and 85.

Find his fifth score.

Total needed = $88 \times 5 = 440$. Known sum = $84 + 92 + 88 + 85 = 349$. Fifth score = $440 - 349 = 91$.__

5 Reasoning: Raise the Average

Mira's average on three science tests is 72. She wants a 78 average after four tests.

What score does she need on the fourth test?

Current total = $72 \times 3 = 216$. Target total = $78 \times 4 = 312$. Needed score = $312 - 216 = 96$.__
