

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.14.03.

1 Earnings Rate

Sophia earns \$12 per hour babysitting.

How much will she earn in 6.5 hours?

$\$12 \times 6.5 = \78 . _____

2 Production Rate

A factory produces 240 toys per hour.

How many toys in 8 hours? How many hours to produce 1,200 toys?

8 hours: 1,920 toys. For 1,200: $1,200 \div 240 = 5$ hours. _____

3 Water Flow Rate

A faucet drips at 2 liters per hour.

How many liters of water are wasted in one week (7 days)?

$2 \times 24 \times 7 = 336$ liters. _____

4 Better Value

Brand X printer prints 20 pages per minute and costs \$80. Brand Y prints 25 pages per minute and costs \$90.

Find the cost per page-per-minute for each. Which is better value?

Brand X: $\$80 \div 20 = \4 per page/min. Brand Y: $\$90 \div 25 = \3.60 per page/min. Brand Y is better value.

5 Reasoning: Kai's Project

Kai can paint 3 fence panels per hour. He needs to paint 24 panels before 5:00 PM. He starts at 12:30 PM.

Does Kai have enough time?

Time available = 4.5 hours. Panels in 4.5 hours = $3 \times 4.5 = 13.5$. He cannot finish 24 panels — he does NOT have enough time.
