

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.15.02.

1 Percentage to Fraction

Convert 25% to a fraction in simplest form.

Write 25% as a fraction over 100, then simplify.

$$25/100 = 1/4. \quad \underline{\hspace{2cm}}$$

2 Multiple Conversions

Convert each to a simplified fraction: 50%, 75%, 40%.

Show your simplification steps.

$$50\% = 1/2; 75\% = 3/4; 40\% = 2/5. \quad \underline{\hspace{2cm}}$$

3 Fraction to Percentage

Convert $3/5$ to a percentage.

Find an equivalent fraction with denominator 100, then write the percentage.

$$3/5 = 60/100 = 60\%. \quad \underline{\hspace{2cm}}$$

4 Benchmark Percentages

Write each as a simplified fraction: 20%, 80%, 60%, 10%.

Show each conversion.

$20\% = 1/5$; $80\% = 4/5$; $60\% = 3/5$; $10\% = 1/10$. _____

5 Reasoning: Mira's Shortcut

Mira says to convert any percentage to a fraction, write the percentage number over 100 and simplify.

Is Mira's method always correct? Use 36% as an example.

Yes. $36\% = 36/100$. $\text{GCF}(36, 100) = 4$. $36/100 = 9/25$. Mira's method works for all whole-number percentages.____
