

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.15.06.

1 Percentage Word Problem: Test Score

Leo got 36 out of 40 questions correct on a test.

What percentage did he get correct?

$$36/40 = 0.9 = 90\%. \quad \underline{\hspace{2cm}}$$

2 Percentage Word Problem: Sale

A store reduces all prices by 15%. A pair of shoes originally costs \$120.

What is the sale price?

$$\text{Discount} = 0.15 \times \$120 = \$18. \text{ Sale price} = \$120 - \$18 = \$102. \quad \underline{\hspace{2cm}}$$

3 Percentage Word Problem: Survey

In a class of 40 students, 60% prefer reading to watching TV.

How many students prefer reading?

$$0.60 \times 40 = 24 \text{ students}. \quad \underline{\hspace{2cm}}$$

4 Multi-Step: Population

A town has 5,000 people. 40% are adults, and 25% of the adults exercise daily.

How many adults exercise daily?

Adults = $0.40 \times 5,000 = 2,000$. Exercising adults = $0.25 \times 2,000 = 500$.

5 Reasoning: Mira's Savings Goal

Mira wants to save 30% of her weekly allowance of \$25. After 8 weeks, she checks her savings.

How much should she have saved after 8 weeks? If she actually has \$55, did she meet her goal?

Weekly goal = $0.30 \times \$25 = \7.50 . After 8 weeks = \$60. She has \$55, so she did NOT meet her goal — she is \$5 short.
