

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.03.03.

1 Divide by Multiples of Ten

Find each quotient.

$$560 \div 80 = \underline{\quad\quad} \quad | \quad 420 \div 60 = \underline{\quad\quad} \quad | \quad 350 \div 70 = \underline{\quad\quad}$$

Answers _____

2 Using Basic Facts

Use a basic division fact to help solve each problem.

What pattern connects the basic fact to the extended division?

Answers and Pattern _____

Basic fact: $24 \div 6 = 4$ → $240 \div 60 = \underline{\quad\quad}$ _____

Basic fact: $45 \div 9 = 5$ → $4,500 \div 90 = \underline{\quad\quad}$ _____

Basic fact: $36 \div 4 = 9$ → $3,600 \div 40 = \underline{\quad\quad}$ _____

3 Remainders with Multiples of Ten

Divide. Write the quotient and remainder.

$$530 \div 60 = \underline{\quad\quad} \text{ R } \underline{\quad\quad} \quad | \quad 380 \div 50 = \underline{\quad\quad} \text{ R } \underline{\quad\quad}$$

Answers _____

4 Road Trip

A road trip covers 840 miles. The family drives 70 miles each hour.

How many hours will the trip take? Show your work using place-value reasoning.

Answer _____

5 Two Division Paths

Kai solves $720 \div 90$ by thinking: $72 \div 9 = 8$, so $720 \div 90 = 8$. Mira solves it by thinking: $720 \div 9 = 80$, then $80 \div 10 = 8$.

Are both methods correct? Show that both give the same answer. Explain which method you prefer and why.

Explanation _____
