

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.04.06.

1 Subtract Mixed Numbers – Same Denominator

Subtract. Simplify if possible.

$$5 \frac{7}{8} - 2 \frac{3}{8} = \underline{\hspace{2cm}} \quad | \quad 6 \frac{5}{6} - 1 \frac{1}{6} = \underline{\hspace{2cm}} \quad | \quad 8 \frac{4}{5} - 3 \frac{1}{5} = \underline{\hspace{2cm}}$$

Answers _____

2 Subtract Mixed Numbers – Unlike Denominators

Subtract. Write answers in simplest form.

$$4 \frac{3}{4} - 1 \frac{1}{3} = \underline{\hspace{2cm}} \quad | \quad 6 \frac{5}{6} - 2 \frac{1}{4} = \underline{\hspace{2cm}}$$

Answers _____

3 Regrouping to Subtract

Regroup the whole number when the fraction part is too small.

$$5 \frac{1}{4} - 2 \frac{3}{4} = \underline{\hspace{2cm}} \quad | \quad 7 \frac{1}{3} - 4 \frac{5}{6} = \underline{\hspace{2cm}}$$

Answers _____

4 Leftover Rope

Kai had $8\frac{3}{4}$ feet of rope. He used $3\frac{5}{6}$ feet to tie boxes.

How much rope is left? Show your work, including any regrouping.

Answer _____

5 Explain When to Regroup

Leo subtracts $6\frac{1}{6} - 2\frac{5}{6}$. He says: "Since $\frac{1}{6}$ is less than $\frac{5}{6}$, I need to regroup." He rewrites $6\frac{1}{6}$ as $5\frac{7}{6}$.

Is Leo's regrouping correct? Verify: does $5\frac{7}{6}$ equal $6\frac{1}{6}$? Complete the subtraction and explain the regrouping step.

Verification and Explanation _____
