

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.05.06.

1 Fraction × Fraction Practice

Find each product in simplest form.

$$\frac{5}{8} \times \frac{4}{5} = \underline{\hspace{2cm}} \quad | \quad \frac{3}{7} \times \frac{7}{9} = \underline{\hspace{2cm}} \quad | \quad \frac{6}{11} \times \frac{11}{12} = \underline{\hspace{2cm}}$$

Answers _____

2 Three Fraction Factors

Multiply three fractions.

$$\frac{1}{2} \times \frac{2}{3} \times \frac{3}{4} = \underline{\hspace{2cm}} \quad | \quad \frac{2}{5} \times \frac{5}{6} \times \frac{3}{4} = \underline{\hspace{2cm}}$$

Answers _____

3 Missing Factor

Find the missing fraction.

$$\frac{2}{3} \times \underline{\hspace{2cm}} = \frac{1}{2} \quad | \quad \underline{\hspace{2cm}} \times \frac{3}{5} = \frac{2}{5} \quad | \quad \frac{4}{9} \times \underline{\hspace{2cm}} = \frac{2}{3}$$

Answers _____

4 Classroom Garden

A school garden is $\frac{3}{5}$ of an acre. The class plants tomatoes in $\frac{2}{3}$ of the garden.

What fraction of an acre is planted with tomatoes? Show your work.

Answer _____

5 Equivalent Products

Atlas claims that $\frac{3}{4} \times \frac{8}{9} = \frac{2}{3} \times 1$ because cross-simplifying gives $\frac{2}{3}$.

Verify Atlas's claim by computing $\frac{3}{4} \times \frac{8}{9}$ two ways: (1) simplify then multiply, (2) multiply then simplify. Do both give $\frac{2}{3}$? Explain why cross-simplification is a valid

Verification and Explanation _____
