

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.11.01.

**1 Read the Protractor**

An angle is shown on a protractor. The angle opens from  $0^\circ$  and the other ray points to  $65^\circ$ .

What is the measure of the angle?

$65^\circ$  \_\_\_\_\_

**2 Identify the Angle Type**

An angle measures  $112^\circ$ .

Is this angle acute, right, obtuse, or straight? Explain how you know.

Obtuse — it is greater than  $90^\circ$  and less than  $180^\circ$ . \_\_\_\_\_

**3 Measure and Classify**

Use a protractor to measure the angle drawn below. The angle appears to be just under a right angle.

Record the measure and classify the angle.

Approximately  $78^\circ$  — acute angle. \_\_\_\_\_

**4 Draw an Angle**

You need to draw an obtuse angle that measures exactly  $135^\circ$ .

Describe the steps you would take with a protractor, then draw the angle.

Place the center of the protractor on the vertex; align one ray with  $0^\circ$ ; mark  $135^\circ$ ; draw the second ray through that mark.

### 5 Reasoning: Mira's Measurement

Mira measured an angle and wrote  $55^\circ$ . Her partner says the angle is actually  $125^\circ$ . They both used a protractor correctly but read different scales.

Who is correct? Explain what likely happened.

Both could be reading different scales on a double-scale protractor. The correct answer depends on which ray aligns with  $0^\circ$ .
