

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.13.04.

1 Three-Quantity Ratio

The ratio of apples to oranges to bananas is 2:3:5.

If there are 10 bananas, how many apples and oranges are there?

1 unit = $10 \div 5 = 2$. Apples = 4; Oranges = 6. _____

2 Share in a Ratio

Atlas, Sophia, and Kai share 120 stickers in the ratio 3:4:5.

How many stickers does each person receive?

Total parts = 12. 1 part = 10. Atlas = 30; Sophia = 40; Kai = 50. _____

3 Find the Total from One Quantity

The ratio of red to blue to green counters is 1:2:3. There are 12 blue counters.

How many counters in total?

1 unit = $12 \div 2 = 6$. Total = $(1 + 2 + 3) \times 6 = 36$ counters. _____

4 Compare Three Ratios

A recipe uses flour, sugar, and butter in the ratio 6:2:1. You have 12 cups of flour.

How much sugar and butter do you need?

1 unit = $12 \div 6 = 2$. Sugar = 4 cups; Butter = 2 cups. _____

5 Reasoning: Leo's Split

Leo, Mira, and Atlas share \$180 in the ratio 2:3:4.

How much does each person get? Who gets the most? Who gets the least?

Total parts = 9. 1 part = \$20. Leo = \$40; Mira = \$60; Atlas = \$80. Atlas gets the most; Leo gets the least. _
