

Name: _____

Date: _____

Solve each problem. Show your work in the box.

Write your final answer on the answer line (or in the blanks shown).

Use the strategies you learned in Lesson 5.13.05.

1 Ratio Word Problem: Smoothies

A smoothie recipe uses 3 cups of berries for every 2 cups of yogurt.

If you use 9 cups of berries, how many cups of yogurt do you need?

Scale factor = $9 \div 3 = 3$. Yogurt = $2 \times 3 = 6$ cups. _____

2 Ratio Word Problem: Teams

A camp divides campers into teams with a ratio of 3 campers to 1 counselor. There are 48 campers.

How many counselors are needed?

$48 \div 3 = 16$ counselors. _____

3 Ratio Word Problem: Paint

Sophia mixes red to yellow in the ratio 5:3. She uses 40 mL of red.

How many mL of yellow? What is the total amount of orange paint?

1 unit = $40 \div 5 = 8$. Yellow = 24 mL. Total = 64 mL. _____

4 Three-Quantity Word Problem

A pet store has cats, dogs, and fish in the ratio 1:2:4. There are 28 animals total.

How many of each animal are there?

Total parts = 7. 1 part = 4. Cats = 4; Dogs = 8; Fish = 16. _____

5 Reasoning: Change in Ratio

The ratio of boys to girls in a club is 3:5. There are 24 boys. Three more boys join.

What was the original number of girls? After the new boys join, is the ratio still 3:5?

Original: 1 unit = 8. Girls = 40. After: 27 boys, 40 girls = 27:40. GCF = 1, so 27:40, which does NOT equal 3:5. The ratio changes.
